

HCI-OS Cybersecurity Report - Monthly

Periodic Compliance & Security Posture Report — CERT-In Regulatory Framework

Reporting Period:	2026-06-21 to 2026-07-21
Generated On:	2026-07-21T22:16:38.172106
Classification:	STRICTLY CONFIDENTIAL
Framework:	CERT-In Directions (2022) & RBI Cyber Security Framework

Periodic Incident Reporting Summary — Form to CERT-In

For official use only:

Report Reference: CERT-In-RPT-20260721

1. Reporting Organization Information

Name:	HCI-OS Security Operations	Organization:	RBI Supervised Entity / CERT-In Constituency
Contact:	CISO / Incident Response Team	Email:	incident@hci-os.gov.in

2. Reporting Period

Period Covered:	2026-06-21 to 2026-07-21	Total Incidents:	15
Report Generated:	2026-07-21T22:16:38	Total Decisions:	0

3. Distribution by Incident Type (Please refer to CERT-In categories)

Incident Type	Count	% of Total
Vulnerability Exploitation	10	66.7%
Other	3	20.0%
Network Scanning	2	13.3%

4. Sector: (Affected sectors during reporting period)

☐ Government (0)	☐ Financial (0)	☐ Power (0)
☐ Transportation (0)	☐ Manufacturing (0)	☐ Health (0)
☐ Telecommunications (0)	☐ Academia (0)	☐ Petroleum (0)
☐ InfoTech (0)	☐ Other (0)	

5. MITRE ATT&CK Tactics/Techniques Observed

Tactic / Technique ID	Occurrences
TA0001	11
T1190	10
T1204	5
T1595	3
Initial Access	2
Execution	2
T1583	2
T1059	1
T1071	1

6. Executive Summary / Analysis

During the reporting period from 2026-06-21T00:00:00 to 2026-07-21T23:59:59, HCI-OS handled a total of 15 cybersecurity incidents across various sectors of the organization. The system's 13-agent architecture successfully detected, analyzed, and responded to threats through coordinated multi-agent operations. The most prevalent incident type was Vulnerability Exploitation with 10 incidents (66.7% of total), indicating continued focus on this attack vector by adversaries. The Unknown sector experienced the highest impact with 15 incidents, requiring enhanced security measures and monitoring. The AI-powered attribution system (Agent A6) successfully identified and tracked threat actor campaigns, enabling proactive defense measures. The GNN-based correlation engine (Agent A5) provided rapid incident analysis through graph-based threat modeling, while the SOAR system (Agent A7) automated containment responses. Federation intelligence sharing (Agent A13) contributed significantly to early threat detection, with cross-organization indicators enhancing our defensive posture. The audit trail maintained by Agent A12 ensures complete incident traceability and compliance with regulatory requirements. These findings demonstrate the effectiveness of the HCI-OS multi-agent approach in handling complex cyber threats and highlight areas requiring continued vigilance and resource allocation.

Periodic Incident Reporting Summary (Continued)

7. Trend Analysis & Threat Intelligence Assessment

Trend Analysis **Note:** No previous period data available for comparison. This analysis shows current period statistics only.
Total incidents: 15 **Top Incident Types:** - Vulnerability Exploitation: 10 incidents (66.7%) - Other: 3 incidents (20.0%) - Network Scanning: 2 incidents (13.3%)

8. Actions Taken / Mitigation Controls

☒ Incidents logged and triaged	☒ Automated SOAR response triggered	☒ Human review conducted (high blast-radius)
☒ MITRE chain correlated per incident	☒ GNN-based anomaly detection applied	☐ Physical infrastructure isolated

9. Security Recommendations & Mandatory Controls

Ref	Recommendation	Priority	MITRE Mitigation
1	Patch Management Enhancement Vulnerability exploitation detected in 10 incidents. Accelerate patch deployment for internet-facing applications.	HIGH	M1051 - Update Software

10. Declaration

This report has been auto-generated by the HCI-OS Multi-Agent Cybersecurity Operations System in compliance with CERT-In Cyber Security Directions (2022) and the RBI Cyber Security Framework. All data is sourced from real-time telemetry, GNN analysis, and SOAR decision logs.
